

Premium Website & Booking Experience Proposal

A customer-first website, smart booking flow and CMS platform designed to reduce WhatsApp back-and-forth, prepare staff before appointments, and create a more polished salon experience.

Phase 1 focuses on the website only. Android app, Play Store and deeper mobile monetisation can be added as Phase 2 after the website deal is approved.

Service-menu reference supplied during the first discussion.

The goal is not to build a brochure. The goal is to build a salon operating system disguised as a beautiful website.

Executive Summary

Amore Nails & Beauty Lounge already has strong service variety, multiple branches and a visual brand that can translate beautifully online. The opportunity is to turn the website into a practical booking and customer-preparation platform, not just a digital price list.

The proposed website will help customers choose the right service, select a branch, complete the correct pre-appointment questions, upload inspiration images, receive preparation and aftercare guidance, and rebook more easily. Staff will receive cleaner information before the client arrives, reducing confusion and improving the customer experience.

1. Cleaner booking experience

Branch, service, add-ons, staff preference, date/time, deposit rules and confirmation in one guided flow.

2. Better pre-appointment information

Smart intake forms collect what staff need before the client arrives, based on the selected service category.

3. CMS control for the salon

Amore can update services, prices, branches, staff, promotions, galleries, FAQs and policies without asking a developer for every small change.

4. Customer retention system

Automated reminders, aftercare, review requests, loyalty, birthday offers and rebooking prompts keep customers returning.

Recommended position: Build the website first. Keep the Android app as a future upgrade once the website proves value and the relationship is secured. That keeps the first proposal focused and avoids handing them a giant scope grenade disguised as ambition.

WHY THIS MATTERS

The Problem This Solves

Area	Opportunity
Current pain point	Beauty salons often manage too much through WhatsApp, phone calls and memory. Clients ask repeated questions, staff chase missing details, and appointment preparation is inconsistent.
Customer confusion	A long menu can be hard to understand without guidance. Clients may not know whether they need soak-off, fill, overlay, tips, tinting, or a specific treatment add-on.
Staff preparation	Technicians need to know inspiration images, current nail product, lash history, sensitivities and service expectations before the appointment starts.
Growth leakage	Without automated reminders, review requests, loyalty and rebooking flows, the salon loses easy repeat revenue. Naturally, money escapes when humans rely on memory.

This website should make Amore easier to book, easier to manage, easier to market, and easier to scale across branches.

WHAT SUCCESS LOOKS LIKE

Target Outcome

- Customers can understand services without needing a long WhatsApp explanation.
- Staff can view booking notes and intake answers before the client arrives.
- Branch-specific service availability, staff and pricing are clear.
- Deposits and cancellation policies can reduce no-shows.
- The gallery turns inspiration browsing into actual bookings through Book This Look buttons.
- The CMS keeps the site current without constant developer involvement.

Website Experience

The website should be designed around a simple, guided journey: choose branch, choose service, answer the right questions, confirm booking, and receive clear next steps.

Booking stage	Customer action
Step 1	Choose branch: The Colosseum, Century Village, Brackenfell, Bothasig Square, Pinelands or N1 Value Centre.
Step 2	Choose service category: Nails, Waxing, Massage, Eyelashes, Brows or Add-ons.
Step 3	Select service and add-ons with price, duration, notes and branch availability.
Step 4	Choose staff member or Any Available, then select date and time.
Step 5	Complete a smart intake form based on the chosen service.
Step 6	Upload inspiration image if needed, accept policies and confirm the booking.
Step 7	Receive WhatsApp/email confirmation, prep instructions, reminders and aftercare.

Key UX rule: never overwhelm the customer. Show only the questions relevant to the selected service. Nobody booking a foot massage needs a novel about lash extensions. Astonishing, but true.

Recommended Website Pages

Page	Purpose
Home	Premium hero, Book Now CTA, service cards, popular treatments, branch selector, gallery preview, reviews, promos and WhatsApp button.
Services	CMS-driven service list with filters for category, branch, Hers/His pricing, price range and duration.
Book Online	Multi-step booking wizard with branch, service, add-ons, staff, date/time, intake, uploads and confirmation.
Gallery	Nail, lash, brow and salon images with Book This Look buttons linked to services.
Branches	Individual SEO-friendly pages for each branch with contact details, map, hours, staff and available services.
Client Portal	Clients can view, reschedule, repeat previous bookings, save preferences and see loyalty status.
Admin Dashboard	Staff can manage bookings, clients, services, pricing, branches, staff, promotions, gallery, reviews, policies and reports.
Policies / FAQs	Cancellation, deposit, late arrival, POPIA privacy, service prep and aftercare guidance.

Smart Client Intake

The main upgrade is the intake engine. It asks different questions depending on the service. This gives staff useful context before the customer arrives and reduces repeated WhatsApp questions.

Nails intake

Hands/feet, current product, soak-off needed, shape, length, nail art, inspiration image, allergies/sensitivities and damaged nail notes.

Waxing intake

First-time/returning client, wax area, skin sensitivity, recent exfoliation/skin treatments, therapist preference and consent checkbox.

Lashes & brows intake

Service type, previous lash set/fill, contact lenses, eye sensitivity, desired style, inspiration image and consent checkbox.

Massage intake

Duration, pressure preference, focus areas, areas to avoid, injuries/discomfort, health considerations and consent checkbox.

Privacy note: The website should include clear consent and POPIA-friendly wording. Intake information should only be visible to authorised staff and should not be exposed publicly.

CMS & Admin Dashboard

The CMS is the hidden engine. It allows Amore to update the website and manage operations without waiting for a developer every time a price, branch phone number or promo changes. Tiny miracles, apparently.

CMS section	What it manages
Services	Name, category, description, price, duration, branch availability, add-ons, gender pricing, image, intake form and active status.
Branches	Name, address, phone, WhatsApp, trading hours, Google Maps link, services, staff and branch-specific notices.
Staff	Name, role, branch, services performed, schedule, profile photo, bio and active status.
Bookings	Client, branch, services, add-ons, staff, date/time, status, deposit status, intake responses and uploaded images.
Clients	Name, phone, email, preferences, booking history, notes, birthday, allergies/sensitivities and loyalty status.
Gallery	Images by category with linked services and Book This Look behaviour.
Promotions	Promo title, discount/offer, start/end date, branch targeting and promo banner.
Reviews / FAQs / Policies	Approved reviews, service FAQs, privacy, deposit, cancellation and aftercare content.

Admin Dashboard Views

Today view

Today's bookings, client arrival times, branch, service, staff, notes and outstanding deposits.

Booking manager

Approve, reschedule, cancel, mark completed/no-show, view intake answers and uploaded images.

Client profiles

Booking history, preferences, birthday, loyalty, notes and consent records.

Reports

Popular services, branch performance, booking conversion, no-shows, repeat clients and monthly revenue indicators.

Marketing controls

Promos, banners, review requests, rebooking campaigns, birthday offers and lapsed-client reminders.

Content control

FAQs, aftercare instructions, policies, gallery, branch pages and staff profiles.

Customer Service Automations

The website should not only take bookings. It should help Amore communicate professionally before and after each visit.

Automation	Purpose
Booking confirmation	Send immediately after booking with branch, service, staff, date/time and policy summary.
24-hour reminder	Include preparation instructions and a reschedule/help link.
2-hour reminder	Short reminder with branch location and WhatsApp support link.
Aftercare message	Service-specific aftercare for nails, waxing, lashes, brows or massage.
Review request	Ask for a Google review or website review after the visit.
Rebooking reminder	Prompt clients based on service cycle: lashes fill, nails maintenance, waxing repeat visit, etc.
Birthday offer	Optional birthday promotion for clients with consent.

WhatsApp can begin as simple click-to-chat links in Phase 1. Full WhatsApp Business API automation can be a paid upgrade after the core platform is accepted.

Branch Information To Seed

The following branch contact details can be used as starter content and verified with the client before launch.

Branch	Phone / WhatsApp
The Colosseum	076 659 8811
Century Village	076 936 8190
Brackenfell	072 468 4241
Bothasig Square	060 669 5785
Pinelands	072 748 1021
N1 Value Centre Branch	082 904 8642

Service category	Starter content
Nails	Manicures, pedicures, gel overlays, acrylic, polygel, soak-off, nail art and add-ons.
Waxing	Hers and His waxing pricing, brows/threading, face, arms, legs, bikini, Brazilian, Hollywood, full body and dermaplaning.
Massage	Hand, foot, Indian head, back & neck, full body and 90-minute full body massage.
Eyelashes & Brows	Classic, hybrid, volume, fills, removals, tinting and henna brow.

AVOID SCOPE CHAOS

Phased Delivery Roadmap

Phase	Deliverables
Phase 1 - Discovery & structure	Confirm services, pricing, branches, booking rules, staff roles, policies, deposit rules and required integrations.
Phase 2 - Website & CMS build	Build responsive website, service catalogue, branch pages, CMS collections and admin foundation.
Phase 3 - Booking & intake engine	Add booking wizard, client intake forms, uploads, notifications, booking status and client portal.
Phase 4 - Launch & optimisation	SEO, analytics, testing, staff handover, basic training, feedback round and launch support.
Future Phase - Android app	Only after the website is approved and operational, build Android app with push notifications, mobile loyalty and Play Store release.

Best sales position: present Phase 1 as a powerful website and booking platform. Mention the app only as a future growth path, not part of the first build. That keeps the pitch believable instead of sounding like a tech buffet assembled during a caffeine incident.

SIMPLE SPOKEN VERSION

Pitch Summary To Use In Conversation

I do not want to build Amore just a normal website. I want to build a premium online booking and client-preparation system. Customers will be able to choose their branch, select treatments, upload inspiration photos, complete the right pre-appointment questions, and receive reminders and aftercare instructions. Your staff will see exactly what the client needs before they arrive, which saves time, reduces confusion and creates a more premium customer experience. The Android app can come later once the website is live and the system is working well.

SEND THIS FIRST

WhatsApp Cold Open Message

Hi [Name], thank you again for giving me the chance to put together a proper website direction for Amore Nails & Beauty Lounge. I had a closer look at the services and branches, and I do not think Amore needs just a basic website. I think the real opportunity is a premium booking and client-preparation platform where customers can choose a branch, select treatments, upload inspiration photos, answer the right pre-appointment questions and receive clear reminders/aftercare. This would help your staff know exactly what each client needs before they arrive and create a smoother customer experience. I have prepared a short proposal PDF for you to review.

Antigravity Website Build Prompt

Use this prompt to generate the website only. It intentionally excludes the Android app for now so the first build stays focused.

Build a premium, production-ready, mobile-first website and booking platform for Amore Nails & Beauty Lounge. This is Phase 1 only. Do not build the Android app yet. The website must be more than a brochure: it must include a CMS, branch pages, service catalogue, booking wizard, client intake forms, admin dashboard and customer-service automation structure.

Business context:

Amore Nails & Beauty Lounge is a multi-branch beauty salon offering nails, waxing, massage, eyelashes, brows and add-on services. The website must feel elegant, premium, trustworthy, simple to use and easy for salon staff to manage.

Brand direction:

Use an elegant beauty-lounge aesthetic with cream, soft blush, rose, black/charcoal, white space and subtle gold accents. The design must feel clean, modern, feminine and premium, not cluttered. Use large clear CTAs, beautiful service cards, strong mobile spacing and polished forms.

Branches to seed:

- The Colosseum: 076 659 8811
- Century Village: 076 936 8190
- Brackenfell: 072 468 4241
- Bothasig Square: 060 669 5785
- Pinelands: 072 748 1021
- N1 Value Centre Branch: 082 904 8642

Core service categories:

- Nails: manicures, pedicures, gel overlays, acrylic, polygel, soak-off, nail art and add-ons.
- Waxing: Hers and His pricing, eyebrow/thread, nose, ear, upper lip, underarm, arms, legs, bikini, Brazilian, Hollywood, stomach, back, full body, full face wax/thread and dermaplaning.
- Massage: hand, foot, Indian head, back & neck, full body and 90-minute full body massage.
- Eyelashes and brows: classic extensions, hybrid extensions, volume extensions, 2-week fills, removal, tinting and henna brow.

Required pages:

1. Home
2. Services
3. Book Online
4. Gallery
5. Branches
6. Individual branch pages
7. About
8. Reviews
9. Contact
10. Client Portal
11. Admin Dashboard
12. Policies and FAQs

Homepage requirements:

- Premium hero section with "Book Now" CTA.
- Service category cards.
- Popular treatments section.
- Branch selector.
- Gallery preview.
- Customer reviews.
- Promo banner controlled from the CMS.
- WhatsApp contact buttons.
- Footer with all branches and contact details.

Services page:

- Load services from the database/CMS.
- Each service must include name, category, description, price, duration, branch availability, optional Hers/His pricing, add-ons, image and Book Now button.
- Include filters for category, branch, price range, duration, Hers/His and popular services.
- Allow customers to add multiple services to one booking.

Booking wizard:

Create a multi-step booking flow:

1. Choose branch

2. Choose service category
3. Choose service
4. Add optional add-ons
5. Choose staff member or "Any Available"
6. Choose date and time
7. Complete service-specific intake form
8. Upload inspiration image if required
9. Review price, deposit/cancellation policy and consent checkbox
10. Confirm booking
11. Show confirmation screen and send notification record

Service-specific intake forms:

For nails, collect hands/feet/both, current product, soak-off needed, desired shape, desired length, nail art required, inspiration image, allergies/sensitivities and damaged/painful nail notes.

For waxing, collect first-time/returning client, area being waxed, skin sensitivity, recent exfoliation/skin treatments, therapist gender preference, irritation/broken skin notes and consent checkbox.

For lashes/brows, collect service type, first-time lash extension status, contact lenses, eye sensitivity/allergies, desired lash style, last lash fill date, inspiration image and consent checkbox.

For massage, collect duration, pressure preference, focus areas, areas to avoid, injuries/discomfort, health considerations and consent checkbox.

CMS/admin dashboard:

Create an admin dashboard where staff can manage services, prices, categories, branches, staff, staff availability, bookings, client intake responses, client profiles, gallery images, promotions, reviews, policies, FAQs and blog posts.

Database tables:

users, clients, branches, staff, service_categories, services, service_addons, bookings, booking_services, intake_forms, intake_questions, intake_responses, gallery_items, reviews, promotions, policies, faqs, notifications, payments, loyalty_points, staff_availability, audit_logs.

Admin dashboard views:

- Today's bookings
- Upcoming bookings
- Booking status management
- Client details
- Intake answers
- Uploaded inspiration images
- Revenue overview
- Popular services
- Branch performance
- Staff schedule
- No-show tracking
- Export bookings to CSV

Customer experience features:

- WhatsApp click-to-chat buttons for each branch
- Email confirmation structure
- Booking confirmation screen
- 24-hour reminder notification record
- 2-hour reminder notification record
- Service preparation instructions
- Aftercare instructions
- Review request after appointment
- Rebooking link
- Loyalty points structure
- Birthday offer structure

Gallery:

Admin can upload gallery images by category. Each image must support a "Book This Look" button that links to a service or starts a booking with that service preselected.

Branch pages:

Create SEO-friendly pages for every branch with branch name, address placeholder, phone/WhatsApp, trading hours, Google Maps placeholder, staff, services available at that branch and reviews.

SEO:

Create SEO-friendly pages and metadata for major services and each branch. Add structured data for LocalBusiness, BeautySalon, Service, Review and FAQ where appropriate.

Privacy and compliance:

Add POPIA-friendly privacy notice, cancellation policy, deposit policy, late arrival policy and consent checkboxes. Store client intake data securely. Do not expose client information publicly. Use role-based admin access.

Technical requirements:

Use a modern full-stack web approach with responsive design. Prefer Next.js/React, TypeScript, Tailwind CSS, Supabase for database/auth/storage, and a clean component structure. Include schema.sql, seed data, .env.example, README and deployment instructions. The app must be fast, accessible, mobile-first and easy to maintain.

Important scope rule:

Do not build the Android app in this phase. Only include a future "Android App Phase 2" note in the roadmap section of the website/admin documentation.

Final output requirements:

- Complete website codebase
- CMS/admin dashboard
- Database schema and seed data
- Responsive UI
- Booking wizard
- Intake forms
- Gallery with Book This Look
- Branch pages
- Policies/FAQ pages
- README with setup and deployment instructions
